Is there really anything we can do about Climate Change?

Context

The week of 26th June to 4th July 2021 is London Climate Action Week. This year all London schools are invited to take part on a **Tuesday 29th June** at our first **Schools Climate Summit**. It’s a great opportunity to link curriculum based climate change learning with global and social learning for the Sustainable Development Goals and encourage pupils to practise social action for change.

We have created four lessons to help you in the period leading up to the Schools Climate Summit. All are independent so you can use them flexibly to suit. Each of the lesson plans are available here:

Learning outcomes

- To place previous climate change learning in a human context and understand that human activity is both the cause and the solution.
- To build a sense of hope that solutions are achievable.
- To understand how individuals can be part of the solution.

Step 1: Game – Climate Change Consequences

Stand in a circle holding a ball, ask pupils if they have ever had a day where everything just seems to go wrong. Ask what happened first. Repeat this to the group and ask pupils to put their hand up if they can think of something bad that may follow as a result. Pass the ball to a learner with their hand up and ask them to give an example of what might happen next. Keep repeating this with learners passing the ball to each other. Carry on until they cannot think of any more consequences.

- For example.
  1: Alarm doesn’t go off
  2: No time for breakfast
  3: You are tired and hungry
  4: You can’t concentrate in lessons
  5: You fall behind in school

- Repeat the game but starting with the words: Deforestation or Melting Ice Caps or Global Pandemic

(if you are short of time – start straight with this activity)

- Ask pupils to put their hand up if they can think of a potential impact that comes with these words. Pass ball to learner with their hand up and ask them to give their impact.

- Now ask pupils to put their hand up if they can think of something that may follow as a result of this impact. Keep repeating this with learners passing the ball to others with their hands up.

1 This game is taken from Oxfam’s climate change resources: (https://www.oxfam.org.uk/education/resources/climate-change-7-11 )
Show pupils this video: ‘How to save our frozen planet’ (8 mins)  

- Write these questions on the board and ask learners to listen out for answers.
- What are greenhouse gases?
- What is clean energy?
- What temperature is within safe limits for Global Warming?

After watching the video ask pupils to share their immediate feelings about what they have seen.

- Do they feel there are achievable solutions to climate change?
- Who do they think should be responsible for leading these solutions?
- If they could ask any question in parliament what would they ask?

Make a note of the questions students would like to ask and explain to students that the UK is unique in the world for agreeing the first national law on climate change in 2008.

Show this video: https://www.youtube.com/watch?v=Exq7Rppq90I

Does this video answer any of the questions they had?
Project Appendix A onto the board and ask if they recognise these organisations and people. Show them this video: https://www.youtube.com/watch?v=VFkQSGyeCWg

Do they know what the different organisations are asking for? Use these links for research:

- WWF - https://www.wwf.org.uk
- Friends of the Earth - https://friendsoftheearth.uk
- David Attenborough - https://en.wikipedia.org/wiki/David_Attenborough
- Extinction Rebellion - https://rebellion.earth

On 1st of May 2019 the UK declared a climate emergency. Headlines across British newspapers included:

- ‘Parliament has shown that it intends to be symbolically at war with climate change with the declaration of a UK climate emergency’.
- ‘The UK motions attempts to translate this ongoing urgency for meaningful change into legislative momentum, which can hold government accountable’.
- ‘The UK is the first country in the world to declare a climate emergency’.

There is no single definition of what this means but many local areas say they want to be carbon-neutral by 2030.

In pairs ask pupils to discuss what actions they will have to take at home or with their families to become more carbon efficient. E.g. walking to school, switching to renewable energy, flying less or eating less meat - all these actions contribute to climate action.

What things are easy to change and what might be more difficult?
Step 4: Helping Teachers Take Action

For individuals to take action for climate change everyone must understand the problem and education is a critical part of that. Campaigners try to influence people to take action for climate change and the UK is unusual in having legally-binding climate change laws. This should make it easier to take serious action but there are still actions Write the following statement on the board or show the article:

“School students could easily go through 11 years of compulsory education and hear climate change mentioned in fewer than 10 lessons out of approximately 10,000”.

This statement was recently made by a London secondary school teacher. https://www.theguardian.com/ environment/2019/feb/21/teachers-to-join-climate-protests-to-demand-curriculum-reform Do you think this should change? What can be done?

Action:
Design a new lesson on climate change that teachers in your school could use and that could be shared with other London schools. (If short of time start this action and finish for homework).

To do this they need to:
1. Decide which topic they will focus on in their new lesson based on what they feel they would like to know more about
2. Describe what they want to learn about in their lesson
3. Plan the lesson. They could use the format of this lesson if it helps (step 1 - starter, step 2 - main activity, step 3 - action). Think about any resources you might need - films, links, images, activities etc
4. Be clear about when they would like to see this lesson take place and how they will persuade the teacher to teach their lesson.
5. Describe why – why they feel it is important for the national curriculum be reformed to make climate and ecological crisis an educational priority?

Pupils (or their teacher) can send their lesson designs malini.mehra@globelegislators.org

Extra Resources
There are some great resources available for teachers on climate change. Here are just a few:

- WWF: Climate change resources - https://www.wwf.org.uk/get-involved/schools/resources/climate-change-resources
- Small Island States on the frontlines of climate change https://www.youtube.com/watch?v=8oS8WToxv5c
- Arctic culture and climate – A British Museum exhibition which finished in Feb 2021 but still worth looking online: https://www.britishmuseum.org/exhibitions/arctic-culture-and-climate
- Podcast: Doorways to Sustainable Schools - http://www.londonsustainableschools.org/doorways-podcast.html

Great extra resources for students to use:

- https://www.sciencemuseum.org.uk/see-and-do/atmosphere
- Add your voice for the planet - https://voicefortheplanet.org
Appendix A: Biggest Climate Threats to the U.K
Climates of the past

The first Arctic Peoples settled in Siberia at least 30,000 years ago. Since then, the Arctic climate has gradually shifted several times, with each shift taking hundreds or thousands of years. This naturally occurring climate variability contrasts with the human-caused climate change of today, which is happening rapidly and within a single generation. The earliest Arctic Peoples responded to these climate shifts with cultural adaptation, material innovation and social collaboration. By studying their resilience, we can begin to understand how to live through such change and perhaps improve our collective response to today's global climate emergency.
Photos from the British Museum’s Arctic Culture and Climate Exhibition
Indigenous Arctic Peoples are on the frontline of global climate change. The Arctic is warming at more than twice the rate of anywhere else. Research predicts that Arctic summers will be ice free within eighty years, affecting us all by altering weather patterns worldwide.

Arctic Peoples have lived with slow, natural climate variability and seasonal weather for 30,000 years. Through adaptation, innovation and collaboration they have persevered in the face of dramatic environmental and social disruption. How might their resilience help us jointly face the challenge of rapid climate change today?
Reflections on climate change

*Embassy of Imagination*, a socially engaged art practice

‘This artwork honours the actions and responses to climate change that have long been led by Inuit communities, informing and inspiring the rest of the world. Global decisions and industrial practices continue to threaten ecosystems and the breadth of human expression. As we collectively face an uncertain climate future, we need immediate change and accountability. Through heartfelt collective efforts, *Atigi, Sulukat*, aims to empower young people, as it is their generation who will inherit the burden of a climate forever changed. We are calling for reciprocal global action and solidarity during this time of transformation.’
